Guardian Publications

Website Review Report

Prepared for discussion · guardianpubs.com

We reviewed all three parts of your website —

- the customer website,
- the admin panel,
- and the server.

We found 11 things that need to be fixed asap.

For each one, this report explains in simple words what is happening now and why it is happening. No technical terms are used.

#	Subject
1	Google login does not work
2	Security risk — someone can get into another person’s account
3	Wishlist button opens a “page not found”
4	Some gaps in the manuscript submission form
5	Some footer links are empty or say “Coming Soon”
6	There is no pre-order option
7	Many pages stay in Bengali when the language is changed
8	There is no search bar to find things across the admin panel
9	Search results appear and then disappear
10	Admin list pages load slowly
11	The product form goes blank after saving

Details

1. Google login does not work

Severity: Urgent

What happens now: Clicking “Sign in with Gmail” does not complete the login.

Why: Google has shut down the old login system it used to provide, but the website is still using that old system.

2. Security risk — someone can get into another person’s account

Severity: Urgent

What happens now: If someone knows another customer’s email address, they can get into that customer’s account.

Why: The server allows the login by only looking at the email address sent from the browser. It never actually checks with Google to confirm who the person really is.

3. Wishlist button opens a “page not found”

Severity: High

What happens now: Clicking the wishlist icon in the top menu shows a “page not found” message.

Why: Some of it is already built but we need to make a new page to show the wishlist

4. Manuscript Terms page opens empty

Severity: Medium

What happens now: The manuscript submission form works and authors can send their manuscripts without any problem. However, clicking the “Manuscript Terms” link opens a blank page.

5. Some footer links are empty or say “Coming Soon”

Severity: Medium

What happens now: Some footer links open an empty page or do nothing at all.

Why: Pages such as About Us, Terms, Privacy Policy and Delivery Policy need their text to be added from the admin panel, and this has not been done yet. The “Download App” image is only a placeholder, and the social media links have not been added in the settings.

6. There is no pre-order option

Severity: High

What happens now: There is only a “Coming Soon” section that displays upcoming books. Customers cannot order those books in advance.

Why: This is not a broken feature. The pre-order option was never built in the first place.

7. Many pages stay in Bengali when the language is changed

Severity: High

What happens now: The language button works, but many pages do not change to English.

Why: On those pages the text was written directly in Bengali instead of going through the language list, so the button cannot change it. Examples include Contact Us, checkout, login, password reset, the footer, and many notification messages.

8. There is no search bar to find things across the admin panel

Severity: Medium

What happens now: There is no search bar at the top of the admin panel to find any book, author or order from one place.

Why: It was never built. Each list page has its own search box, but staff have to go to the correct page first in order to use it.

9. Search results appear and then disappear

Severity: Medium

What happens now: When you search in the author or product list, the results show for a moment and then the full list comes back.

Why: Right after the search results arrive, the page loads the full list again and places it on top of the results.

10. Admin list pages load slowly

Severity: High

What happens now: Opening a list such as products, orders or authors downloads all of the records at once. Clicking a page number downloads everything again.

Why: The pages ask for the whole list instead of one page at a time. This may feel acceptable today, but as the number of books and orders grows, these pages will keep getting slower and will eventually become very hard to use.

11. The product form goes blank after saving

Severity: High

What happens now: After editing a book and clicking Update, every field in the form becomes empty. It looks as if the information has been lost.

Why: The information is saved correctly. The form is simply being cleared by mistake after saving.
